| Agricultural Research Intensity                |           |           |           |
| Spending as a share of agricultural GDP        | 0.21%     | 0.42%     | 0.33%     |
| FTE researchers per 100,000 farmers            | 10.54     | 16.72     | 21.89     |

Note: Acronyms, definitions, and an overview of agricultural R&D agencies are available on page 4. Data for non-ARCN institutes were estimated using 2008 survey data.

---

#### By virtue of size, Nigeria leads SSA in terms of agricultural research capacity and spending levels. Nevertheless, its investment in agricultural research as a share of agricultural GDP has always been quite low (0.33 percent in 2011).

#### Yearly growth in agricultural R&D spending slowed during 2009–2011 and fluctuated significantly from year to year. The country still needs substantial research-related infrastructure, equipment, and facilities.

#### Researcher capacity at Nigeria’s ARCN institutes increased across all qualification levels during 2009–2011, but most strongly among those qualified to the MSc-degree level. The slow growth of researchers with PhD degrees is of concern because half of the institutes’ senior researchers are approaching retirement age.

---

#### FINANCIAL RESOURCES, 2011

<table>
<thead>
<tr>

</tbody>
</table>

Note: Shares are based on data for 9 out of 15 ARCN institutes.

---

#### INSTITUTIONAL PROFILE, 2011

- **Higher Education**: 41%
- **ARCN**: 42%
- **Other Government**: 16%

Note: Other government and higher education were estimated using 2008 survey data.

---

#### RESEARCH FOCUS, 2011

- **Crops**: 51%
- **Fisheries**: 21%
- **Livestock**: 17%
- **Natural Resources**: 2%

#### MAJOR CROPS

- Oil palm: 13%
- Cassava: 10%
- Rubber: 8%
- Cacao: 7%
- Rice: 6%
- Vegetables: 6%
- Fruits: 5%

Notes: Major crops include those that are the focus of at least 5 percent of all crop researchers. Shares are based on data for ARCN institutes only. 46 percent of total crop researchers focused on a wide variety of other crops.

---

#### RESEARCHER PROFILE, 2011

- **71% Male**
- **29% Female**

</tr>
</tbody>
</table>

Note: Due to lack of availability, researcher data are for the 15 ARCN institutes only.

---
The number of researchers with PhD degrees has grown slowly compared with the number of researchers with MSc and BSc degrees. Moreover, many of these senior researchers are approaching retirement age, and a new policy mandating that directors retire upon the completion of eight years of service will likely exacerbate this situation.

On the whole, the number of researchers employed at ARCN agencies increased across all qualification levels between 2008 and 2011. Shares of PhD-qualified researchers were as high as 84 percent at NAPRI and 55 percent at IAR&T in 2011, but they were as low as 11 percent at two of the other agencies.

In 2011, more than half the researchers with PhD degrees were more than 50 years of age. Newer recruits were generally younger and qualified to the BSc level only.

Training and mentoring the large number of recently recruited junior researchers should continue to be a priority at the ARCN institutes. In addition, the proposed modifications to pay scales and employee conditions of service—including the introduction of a chief research fellow classification (which would be equivalent to a university professor)—should be approved to address difficulties in retaining staff.

### Total number of researchers, 2011 (FTEs)

**Nigeria**: 2,687.6

**Kenya**: 1,150.9

**South Africa**: 746.3

**Uganda**: 353.9

### Growth in number of researchers, 2008–2011

**Nigeria**: 31%

**Kenya**: 13%

**South Africa**: −5%

**Uganda**: 13%

### Share of PhD researchers, 2011 (FTEs)

**Nigeria**: 25%

**Kenya**: 32%

**South Africa**: 36%

**Uganda**: 31%

*For Nigeria and South Africa, data on the share of PhD researchers only applies to the ARCN and Agricultural Research Council agencies, respectively.*
STRATEGIES TO RESTRUCTURE AND STRENGTHEN CAPACITY AT ARCN

Nigeria was selected to participate in the second phase of the World Bank–funded WAAPP, developed to accelerate agricultural productivity growth in select countries across West Africa. Phase one, although intended to begin in 2011, was delayed until 2013 and will run until 2016 with a value of US$51 million. Nigeria's entire agricultural research system is expected to benefit from the improved technologies, including ARCN and its institutes, the universities, the federal departments of extension and fisheries, the National Agency for Genetic Resources and Biotechnology, the National Agricultural Seed Council, farmers, and private seed companies and hatcheries.

The program is supporting training and capacity building: currently over 40 researchers are undertaking postgraduate diploma and MSc and PhD degree training, and another 41 staff members are undertaking short-term courses.

WAAPP is also providing funding for the development of a plan to restructure ARCN according to the country's Agricultural Transformation Agenda. This process offers an opportunity to reassess national research priorities and address capacity and financial constraints. Highly performing national agricultural research systems such as those of India, China, Kenya, Uganda, and Brazil are currently being studied to provide key lessons and a possible model for ARCN to follow.

OVERVIEW OF NIGERIA’S AGRICULTURAL RESEARCH AGENCIES

ARCN coordinates the agricultural research activities of 15 national agricultural research institutes, which together account for almost half of the country’s agricultural researchers. The largest of these agencies are NIOMR (employing 190 FTE researchers in 2011), NVRI (149 FTEs), NIFOR (107 FTEs) and NIHORT (105 FTEs). Seven other (non-ACRN) government agencies conduct agricultural research (employing an estimated total of 443 FTEs in 2011). A significant number of agricultural higher education agencies conduct agricultural research in Nigeria at both federal and state levels, including 122 specialized universities, colleges, faculties, and departments (estimated total of 1,107 FTEs). Regrettably, data collection could not be completed for these agencies due to a protracted strike. Research conducted by nonprofit and private-for-profit companies in Nigeria is minimal and is therefore excluded from this analysis.

ASTI DATA PROCEDURES AND METHODOLOGIES

- The data underlying this factsheet were predominantly derived through primary surveys, although some data were drawn from secondary sources or were estimated.
- Public agricultural research includes research conducted by government agencies, higher education agencies, and nonprofit institutions.
- ASTI bases its calculations of human resource and financial data on full-time equivalent (FTE) researchers, which take into account the proportion of time staff actually spend on research compared with other activities.
- ASTI presents its financial data in 2005 local currencies and 2005 purchasing power parity (PPP) dollars. PPPs reflect the relative purchasing power of currencies more effectively than do standard exchange rates because they compare prices of a broader range of local—as opposed to internationally traded—goods and services.
- ASTI estimates the higher education sector’s research expenditures because it is not possible to isolate them from the sector’s other expenditures.
- Note that, due to decimal rounding, the percentages presented can sum to more than 100.

For more information on ASTI’s data procedures and methodology, visit www.asti.cgiar.org/methodology; for more information on agricultural R&D in Nigeria, visit www.asti.cgiar.org/nigeria.

ACRONYMS USED IN THIS FACTSHEET

- AgGDP: Agricultural gross domestic product
- ARCN: Agricultural Research Council of Nigeria
- CARGS: Competitive Agricultural Research Grant Scheme
- FTE(s): Full-time equivalent (researchers)
- IAR&T: Institute of Agricultural Research and Training
- NAPRI: National Animal Production Research Institute
- NIFOR: Nigerian Institute for Oil Palm Research
- NIHORT: National Institute of Horticultural Research
- NIOMR: Nigerian Institute for Oceanography and Marine Research
- NVRI: National Veterinary Research Institute
- PPP: Purchasing power parity (exchange rates)
- R&D: Research and development
- SSA: Africa South of the Sahara
- WAAPP: West Africa Agricultural Productivity Program

ABOUT ASTI, IFPRI, AND ARCN

Working through collaborative alliances with numerous national and regional R&D agencies and international institutions, Agricultural Science and Technology Indicators (ASTI) is a comprehensive and trusted source of information on agricultural R&D systems across the developing world. ASTI is led by the International Food Policy Research Institute (IFPRI), which—as a CGIAR member—provides evidence-based policy solutions to sustainably end hunger and malnutrition and reduce poverty. The Agricultural Research Council of Nigeria (ARCN) is a parastatal under the Federal Ministry of Agricultural and Rural Development responsible for the guidance and coordination of agricultural research activities in Nigeria.

ASTI/IFPRI and ARCN gratefully acknowledge participating agricultural R&D agencies for their contributions to the data collection and preparation of this country factsheet. ASTI also thanks the Bill and Melinda Gates Foundation for its generous support of ASTI’s work in Africa south of the Sahara. This factsheet has been prepared as an ASTI output and has not been peer reviewed; any opinions are those of the authors and do not necessarily reflect the policies or opinions of IFPRI or ARCN.
